## About MIS

The MIS (Mapping Instrument Service) service gives clients the ability to map across various asset classes e.g. CDS, Bonds, Equity and multiple exchange listings. The service is customisable and caters for the needs of the client.

## Who uses MIS?

BASEL III is focusing the attention of Investment Banks on managing risk across all asset classes and sources of pricing. It requires a financial institution to measure its risk across all asset classes for counterparty or an issuer. This is only possible if the financial institution has the ability to cross-map all assets. We work with teams in -

- Compliance
- Market Data
- Risk Management
- Trading Desk
- Valuation
- Fixed Income Research
- Liability Management

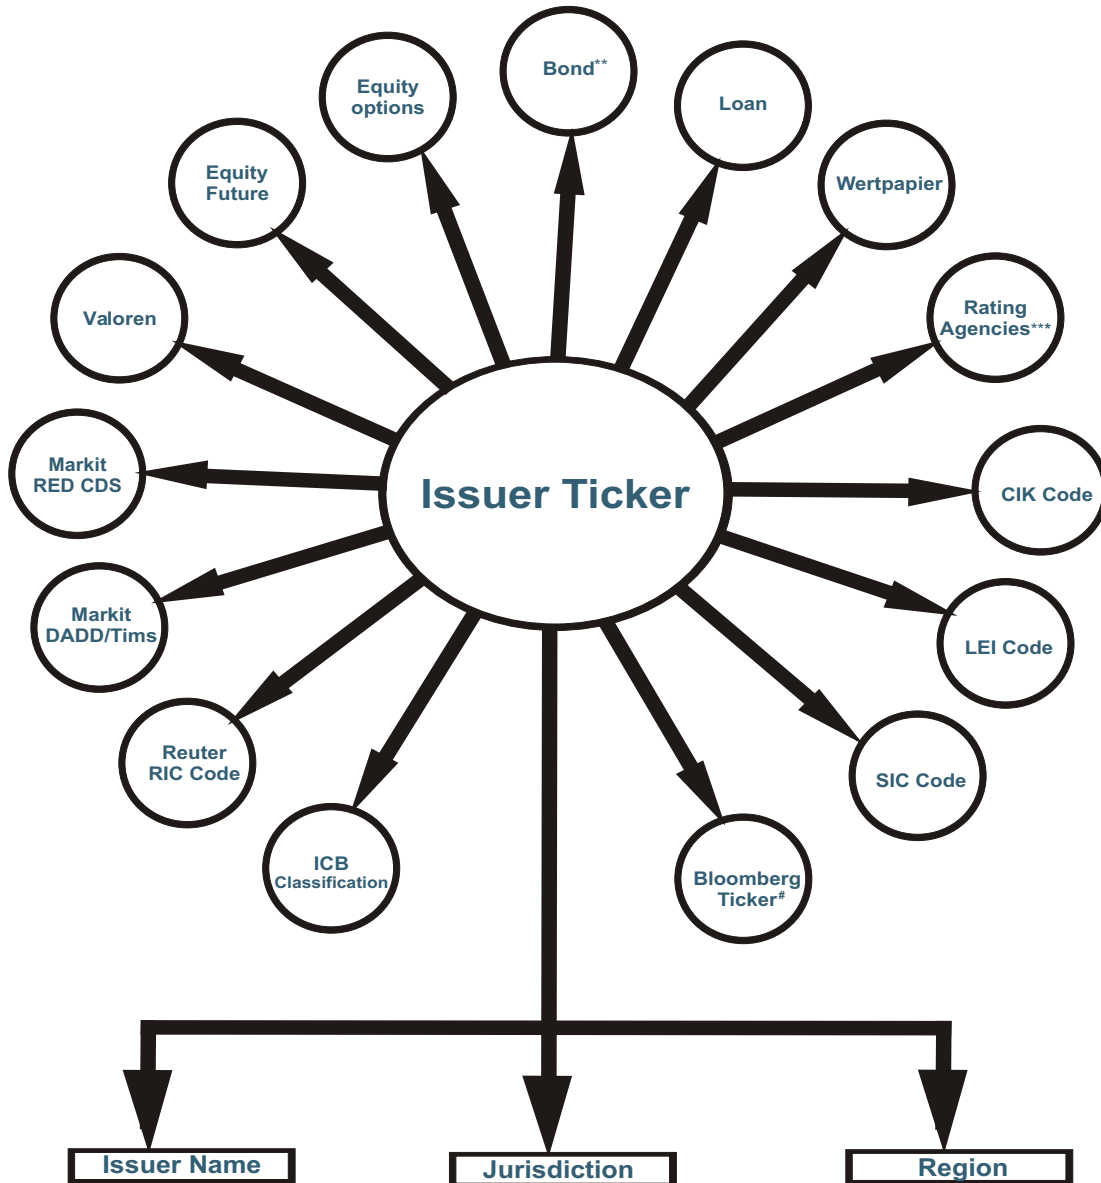

## Why MIS?

Financial Markets are ever-evolving to produce better returns on their portfolios and investments. In order to produce better return, the managers need to understand the cross asset risk of an issuer.

It is complex task to relate one set of financial instruments with another keeping in view the rapidly changing and growing sets of instruments trading in the modern financial market.

The difficulty of this is further fuelled by internal Chinese walls which make the task of consolidating data across varying assets classes near impossible. In current turbulent times it is imperative Operational Risk Management can value risk across its financial institution.

## Example Relation Map of Instruments

\* The client needs to have data license from respective vendors.

\*\* ISIN/CUSIP Common Code /Sedol.

\*\*\* S&P, Fitch & Moody's.
